

TeleScan® Serves 1,000th Patient

Austin, TX (October 19, 2023) – TeleScan® by BB Imaging, a leading ultrasound provider, is proud to announce a groundbreaking milestone in patient care with the successful examination of their 1,000th patient. The achievement is an important step forward in their mission to improve health outcomes through innovative ultrasound technology and excellence in healthcare.

“This is a fantastic achievement to celebrate in our first year of service,” said Blanca Lesmes, CEO of TeleScan. “We are passionate about serving patients. The more patients that are seen by our expert perinatal sonographers, the more high-risk indicators we can identify. When we do that, we can better monitor and treat high-risk pregnancies, which will ultimately help to reduce our nation’s staggering maternal mortality rate.”

The 1,000th patient milestone showcases the team’s dedication to providing the best possible care to patients and the best possible solutions to providers. TeleScan clients have already celebrated a host of achievements including:

- An average 30-40% increase in billing
- A 61% decrease in report turnaround times
- A 50-75% decrease in the time until the next available appointment
- The provision of a shorter travel time for 20% of patients

TeleScan, a telesonography®-as-a-service product, launched earlier this year and connects providers and their patients with expert sonographers. The software is HIPAA-compliant, FDA-cleared, and supports American Institute of Ultrasound in Medicine criteria. TeleScan enables providers in any location to identify high-risk pregnancies and provide early intervention, which can ultimately improve maternal outcomes. With the integration of cutting-edge technology, TeleScan has revolutionized care delivery in ultrasound, making it more efficient, precise, and patient-centered.

About TeleScan:

TeleScan is a telesonography provider that connects healthcare facilities and their patients with remote, expert sonographers. By combining a facility's existing resources with our FDA-cleared and HIPAA-compliant technology, we can bring high-quality prenatal ultrasound care to all patients. Our partners include large hospital systems, private practices, and federally qualified healthcare centers in underserved locations across the U.S. To learn more, visit telescan.ai.
